PROJECTS

Online Real Estate Intelligence System (Course ITEC 4010: System Analysis and Design)

- Led a team of five in the front and back-end development of an online real estate intelligence system where buyers can search properties of interest and book appointments, and sellers can obtain property appraisals.
- Skills employed: HTML / JS / CSS for front-end and PHP / MySQL for back-end database processes.

York University Search Engine (Course ITEC 4020: Internet Client-Server Systems)

- Designed and managed a web engine application that crawls and indexes hundreds of pages of the York University website and can return the most relevant pages based on user-specified keywords.
- Skills employed: Java for web crawling and indexing.

Mutation Mobile Game (Course PRJ 666: Project Implementation)

- Managed a team of three to produce an Android tower-defense game where players survive waves of monsters of varying difficulty by upgrading weapons and health.
- Skills employed: LibGDX (Java) framework for game development and PHP / MySQL for online leaderboard tracking of high scores.

Transit Central (Personal – http://www.transitcentral.net)

- Designed and developed a public transit application providing real-time route information on over fifty transit corporations throughout North America.
- Skills employed: Android Software Development Kit (Java) for application development.
